OVERVIEW

Frontier Pitts Middle East is a leading supplier of security solutions, specializing in the manufacturing and installation of barriers, gates, road blockers, bollards, and pedestrian control gates and turnstiles.

With a strong emphasis on safety and security, Frontier Pitts caters to various industries including airports, government buildings, border stations, educational institutions, data centers, public utilities, and banks.

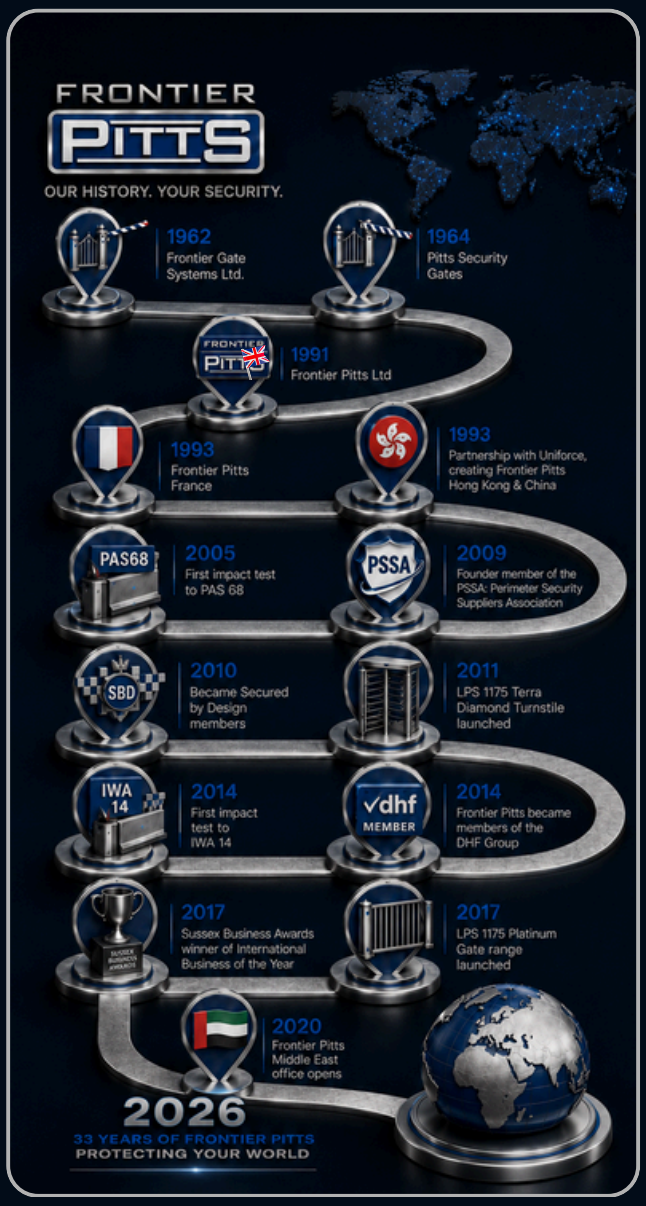

COMPANY HISTORY

The highly respected and well-established product portfolios of Frontier Gates and Pitts Security Gates were the foundation of what Frontier Pitts has achieved over the last three decades and have shaped who we are today.

Frontier Pitts is globally recognized for its exceptional British engineering, with every piece of equipment meticulously designed and custom-made at our UK Head Office.

Our presence is strong across the Middle East, with our regional headquarters in the UAE delivering tailored security solutions. We lead the European and African markets from our office in Nîmes, France, and operate extensively across Asia from offices in China and Hong Kong.

Our global reach is supported by installations in over 100 countries, multilingual project management teams, and partnerships throughout the Middle East and worldwide.

MISSION

Our mission is to design and manufacture exceptional gates, road blockers, bollards, and barriers that combine innovative engineering, superior craftsmanship, and unparalleled functionality. We are committed to delivering high-quality products that enhance security, privacy, and aesthetics.

A key aspect of our commitment to quality is our LPS 1175-certified gates. The LPS 1175 certification, issued by the Loss Prevention Certification Board (LPCB), is a globally recognized standard that assesses the resistance of physical security products against forced entry. This certification ensures that our gates meet rigorous standards, providing robust protection against burglars, intruders, activists, and other threats. By incorporating LPS 1175-certified gates into our product range, we emphasize our dedication to delivering superior security solutions that safeguard lives and assets.

Our aim is to protect lives and secure public spaces through the design and manufacturing of cutting-edge hostile vehicle mitigation products. With a focus on engineering excellence, rigorous testing, and ongoing research, we strive to deliver superior products that surpass industry standards. Our mission extends beyond physical security, as we actively collaborate with stakeholders to raise awareness, educate, and promote best practices in hostile vehicle mitigation.

FRONTIER PITTS MIDDLE EAST

SERVICES

Pre-sales

Our pre-sales team works with UAE and GCC clients to assess site conditions, threat levels, and compliance needs, then delivers product recommendations, technical documentation, and budgetary proposals to guide decision-making. Working alongside sales and design, we ensure every solution, from gates and barriers to bollards and turnstiles, is technically sound and matched to client requirements from the start.

Sales

Our sales strategy is to ensure that the products and solutions we quote are aligned with the client's requirements and project profile. This includes considering applicable local and international standards, environmental conditions-particularly the demanding climate of GCC countries-and the operational requirements of each project.

Business and Development

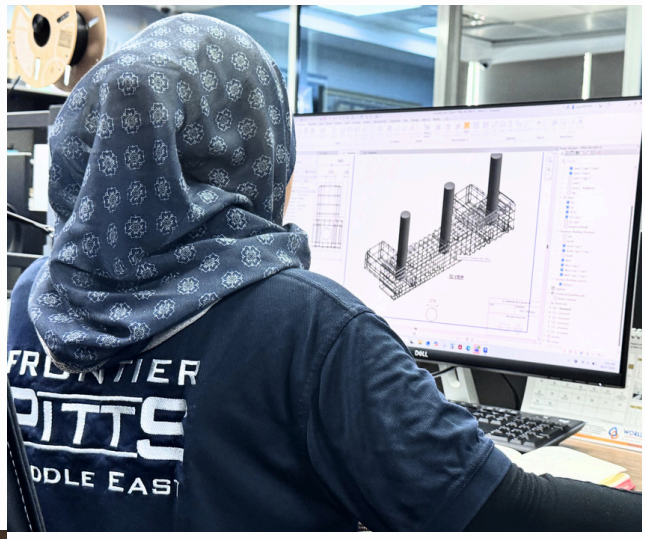

Our business development team builds relationships with clients, consultants, and contractors across the globe, identifying early-stage projects where our security solutions are the right fit. We engage stakeholders on project requirements and position our range of gates, barriers, bollards, and turnstiles accordingly, working closely with the sales and design to turn opportunities into long-term partnerships.

SERVICES

Engineering & Design

Our engineering and design process begins with a detailed site assessment, factoring in threat levels, vehicle dynamics, and pedestrian flow before any solution is proposed. From there, our engineers develop technical drawings and site-specific layouts using advanced CAD software, refining the design through close collaboration with architects, consultants, and clients until it meets both operational and architectural requirements.

Procurement & Materials

Our procurement and materials team sources components and raw materials from certified British and international suppliers, ensuring every product meets the strict quality and performance standards required for our HVM and LPS 1175-certified range. We maintain close oversight of the supply chain, from material selection through to final assembly, so every gate, barrier, and bollard delivered to site meets the same standard our clients rely on.

Manufacturing

Our manufacturing process takes place under strict quality control, from precision engineering and fabrication through to final assembly and testing. Every gate, barrier, and bollard is built to meet internationally recognized standards, ensuring consistent performance and durability across every unit that leaves our facility. Our fabricators are highly skilled and thoroughly trained in the production.

SERVICES

Quality Control

Our quality control process runs through every stage of production, from incoming material inspection to final testing before dispatch. Each gate, barrier, and bollard is checked against internationally recognized standards, to ensure consistent performance and reliability on every site. To ensure reliability and long-term performance, we often conduct Factory Acceptance Tests (FAT) for our clients, and Site Acceptance Tests (SAT) to ensure what we crash test is what we supply.

Delivery & Logistics

For most of our projects across the GCC, we manage transportation and logistics to provide our clients with a hassle-free experience. This approach reduces overall project risk, ensures timely and secure delivery, and allows the entire process to be handled by our experienced and professional logistics team.

Site Installation

Our engineers are fully trained, highly skilled professionals with extensive experience in the installation, commissioning, and maintenance of our products, equipped with the specialist tools, equipment, and safety gear needed to work efficiently and to the highest standards, and each is provided with a dedicated, fully equipped Frontier Pitts service vehicle to support on-site operations, ensuring they can respond promptly and complete the work safely, professionally, and with minimal disruption to the client.

SERVICES

Testing & Commissioning

Our testing and commissioning process verifies that every installed system performs to its certified standard under real site conditions, including full functional and safety checks. Our engineers carry out final calibration and sign-off in line with British and international standards, providing clients with documented proof of performance before the system goes live.

Product Certification

Our products are certified to internationally recognized standards, including IWA 14, PAS 68, ISO 22343 and LPS 1175, verifying performance under real-world impact and forced-entry conditions. These certifications give clients confidence that every gate, barrier, and bollard we supply has been independently tested and proven to perform when it matters most.

Warranty

All equipment we supply is backed by a comprehensive warranty, covering manufacturing defects and performance under normal operating conditions. Our team provides clear terms and ongoing support, giving clients confidence in the long-term reliability of their investment.

SERVICES

Client Training & Handover

Once installation and commissioning are complete, our team provides hands-on training to client staff, covering safe operation, routine checks, and basic troubleshooting for the installed system. We follow this with a formal handover, including full documentation and certification, ensuring clients are fully equipped to operate and maintain their security solution from day one.

After Sales & Maintenance

Our after-sales and maintenance team provides ongoing support once a system is live, including scheduled servicing, inspections, and rapid response for any operational issues. This keeps every gate, barrier, and bollard performing to its certified standard throughout its working life, protecting the client's investment long after installation.

Warehouse & Spareparts

Our warehouse holds a ready stock of genuine spare parts for every product line, allowing us to respond quickly to maintenance and repair needs across the UAE and GCC. This reduces downtime for clients and ensures that any replacement part fitted meets the same certified standard as the original installation.

PRODUCT RANGE

Frontier Pitts Middle East offers a comprehensive range of security products, including barriers, gates, bollards, road blockers, and turnstiles. Our solutions are designed to provide robust protection and efficient access control for various environments. Our product ensure safety and operational efficiency by preventing unauthorized vehicle and pedestrian access. All products are designed and manufactured by Frontier Pitts.

BOLLARDS

We manufacture high-security bollards available in static, automatic, and removable options. These bollards are designed to protect pedestrians and infrastructure from vehicular threats. Built to withstand significant impact, they meet rigorous international standards, ensuring both durability and reliable performance in high-risk environments.

GATES

At Frontier Pitts, we produce high-security gates, including sliding, swing, and bi-folding options. Our range includes bullet-resistant, crash-rated, and LPS 1175 Platinum gates (SR1, SR2, and SR3), tailored to various requirements. Engineered to meet stringent standards, our gates ensure robust access control and enhanced protection against unauthorized entry.

TURNSTILES

We offer full-height and high-security turnstiles, including the LPS 1175 Platinum Turnstile (B3), designed for effective pedestrian control and access management. Engineered for reliability and durability, our turnstiles ensure secure and smooth operation in various environments, meeting stringent international standards for robust security and efficient entry management.

BARRIERS

With a wide range of designs, colors, and lengths available, you can be confident of finding a barrier solution to meet your specific requirements. All barriers are designed and manufactured by Frontier Pitts, ensuring consistent quality, reliability, and performance.

BLOCKERS

We produce robust road blockers designed for high-security applications. These road blockers provide effective vehicle access control and protection against unauthorized entry. Engineered to meet stringent international standards, they offer reliable and durable security solutions for various environments.

OUR PROJECTS

OIL & GAS

- Omani Gas Company OGC (Oman)
- Petroleum Development Oman PDO (Oman)
- Shell (Oman)
- OQ (Oman)
- BGC Shell (Iraq)
- ENI Iraq (GE) (Iraq)
- Hammar Mishrif Zubair (Samsung) (Iraq)
- Halliburton Basra (Iraq)
- Schlumberger Rumaila (Iraq)
- BP Rumaila (Iraq)
- Lukoil (Iraq)
- Qatar Petroleum (Qatar)
- ADNOC (UAE)

HEALTH CARE

- King Faisal Hospital, Riyadh (KSA)
- Shakhbout City Rehabilitation Centre (UAE)
- Royal Oman Police Hospital (Oman)

COMMERCIAL BUILDINGS

- MBC (KSA)
- Oman Tel (Oman)
- Media Zone (UAE)
- Pure Data Center (UAE)
- Qatar National Convention Center (Qatar)
- Oman Cultural Exhibition Center OCEC (Oman)

PUBLIC PLACES

- Marina Mall (UAE)
